

Scenario:

You are an accountant in Los Angeles working a 9-5 in a large office building. Your office building has a parking deck, but the spots are not reserved, so every day you park somewhere new. You're in a rush today and quickly park, and then run to your office. You work an 8-hour shift and go the parking deck with no recollection of where you left your car. You don't want to use the emergency alarm, because there are people nearby still working. Use our app to silently locate your car.

Task 1: Open the app and tap the car icon.

Task 2: Follow the directions at the top of the screen to find your car.

Task 3: Once you get to your car, check your tire pressure on the app.

Notes:

At least 3 changes that should be made to the app:

- Make the car diagnostics easier to find
- Give more information about past drives
- Have it send notifications to the user when service is needed.

At least 3 things to keep the same:

- Pop up directions
- Information about your car
- Showing past drives
